and Telecommunication  
Engineers (IETE)**

### MESSAGE

My Dear Students,

As you all know, The Institution of Electronics and Telecommunication Engineers (IETE) celebrates Students' Day, every year, at all its centres on 2<sup>nd</sup> of February in a befitting manner. The day is celebrated with an aim to encourage the students to get involved with local sections, technical communities, and affinity groups to gain access to unparalleled networking opportunities and the chance to build soft skills and lasting friendships.

Our Students and IETE Students' Forum (ISF) Members are very dear to us because here we have a body whom we can help groom even before they pass out from the engineering colleges. Since its inception, IETE has been committed towards its students and conducts technical events with an aim of infusing in the students the true essence of Electronics. Engineering is not just about technical skills, but about applying knowledge responsibly to improve the human condition and build a better, more sustainable world. IETE makes every effort to encourage its students towards **lifelong learning**, and **professional engagement** to address global challenges and contribute to the benefit of humanity.

The students' Day is specifically dedicated to the students and all activities are planned keeping in view their interest. I am certain that the day will provide an engaging and intellectually enriching experience, fostering a spirit of learning and innovation among students. I also believe that it will offer a dynamic activity-oriented learning environment since a large no. of technical activities, workshops, and programmes to recognize the dedication, creativity, and achievements of students and alumni in the field of technology are planned at various centres. I am confident that the students will participate with vigor and enthusiasm to make this event a splendid success.

Happy Students' Day to all you future builders, innovators, and problem-solvers! May your passion for turning ideas into reality fuel your journey, keep learning, keep creating, and never stop designing the impossible.

(Sunil)
